# Acknowledgement of Country

## ***AI for Socially-Responsible Impact: Use Cases for Australian Not-for-Profits***

### **Contents include:**

- Where to start when implementing AI in your NFP or SE
- Existing uses of AI in NFPs across different social impact sectors and how they could apply to you
- How to use AI and generative AI to enhance NFP and SE productivity and outreach, and to work towards your mission

# Part of a broader initiative

Responsible AI capability uplift for Australian NFPs and social enterprises

- **Responsible AI education and training** (**introductory** and specialised)
- Helping NFPs and social enterprises develop and use AI responsibly - e.g.\*:
  - Assistance with AI strategy and roadmapping
  - Advisory on safe and responsible development and deployment of AI systems
  - AI system assessments
  - AI innovation workshops
  - \*conditions apply and subject to availability

Offerings are **free** to qualifying Australian NFPs and social enterprises.

*Gradient's work on this is supported by a grant from Google.org, Google's charitable arm.*

# Generative AI trends

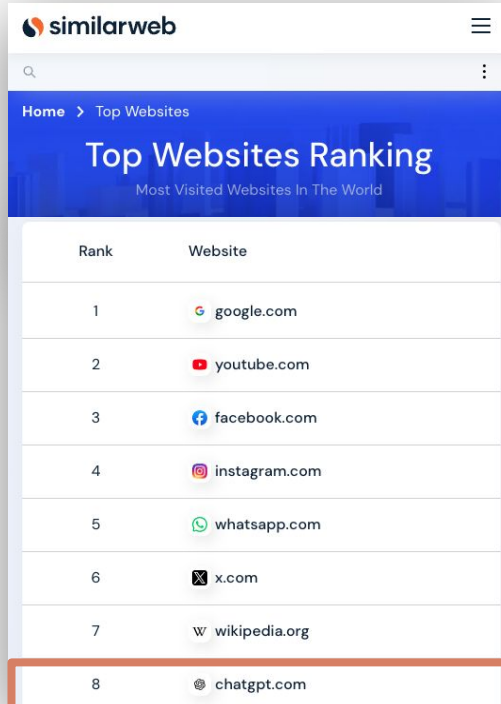

## Big Tech's AI splurge

The U.S. took the lead globally in terms of overall regional generative AI investment raised.

Out of the \$56 billion total siphoned into genAI firms globally over 2023-24, roughly 80% of the cash went to U.S.-based firms, Accel said, also noting that [Amazon](#), [Microsoft](#), [Google](#) and [Meta](#) are each investing an eye-watering average \$30 billion to \$60 billion in AI per year.

# Aus NFPs are interested in AI!

## Infochange: 2024 Digital Technology in the NFP Sector Report

### ARTIFICIAL INTELLIGENCE

In 2024, 76% of organisations use generative or conversational AI tools, a 52% increase over the previous year.

Generative AI platforms respondents would recommend to other NFPs

Of those using generative AI, how do they benefit from its functionality

Only 12% of NFPs have a guideline, framework or policy to manage usage

# Aus NFPs are interested in AI!

## Not-for-profits getting smart about artificial intelligence: ICDA survey

Posted on 07 Feb 2024

By Matthew Schulz, journalist, Institute of Community Directors Australia

*Nearly all not-for-profits are using artificial intelligence, yet just a handful have adopted AI governance principles to match.*

Not-for-profit leaders believe there's potential to make greater use of AI in their organisations to make data-driven decisions (21%), write better grant applications (20%), analyse data more effectively (15%), and improve customer engagement (9%).

## CHARITIES AND ARTIFICIAL INTELLIGENCE

### Examples of charities using AI

- A legal services charity strengthened the support it delivered by developing a natural language AI tool which helps identify people's legal issues and then connect them to the most appropriate support.
- A charity with a high reliance on donor funding used AI to improve the efficiency of their fundraising appeals to segment and more accurately target donors. The initiatives significantly reduced campaign costs while increasing the revenue raised in appeals.
- A charity created an education dashboard system that, through the use of AI and data, aimed to address educational inequality by pushing real-time information to front-line staff.

We are an independent, not-for-profit research institute

We work to bring safety, accountability, transparency and ethics into AI

We work on

- **research** into developing and using AI safely and responsibly
- **practice** through education, audits and advice for businesses, government and NFPs
- **policy** development and advice to government

# Case Study: The problem

Source: [The Refugee Project](#)

**27,320,316**  
refugees in 145 countries  
from 153 origin countries

Imagine you're a refugee who has just arrived in a new country, seeking safety and a fresh start, but you're not able to communicate your most basic needs.

This is the reality for countless refugees worldwide, particularly those who speak less common languages like Tigrinya or Rohingya.

# Case Study: The problem

Existing translation technologies often perform poorly with less-serviced languages because they lack sufficient training data

## The 'Global South'

As defined by the Organization for Women in Science for the Developing World, a unit of UNESCO

Created with Datawrapper

Source: [World Economic Forum](#)

Shortage of interpreters for many languages common in the Global South

## 'Significant problem': Why a lack of interpreters is putting health of migrants at risk

The health of migrants and refugees living in Australia's rural and regional areas could be suffering due to a lack of interpreters for medical and mental health appointments.

## The human element

“You have to have that touch  
of **human emotions** to it”

- Roza Tesfazion

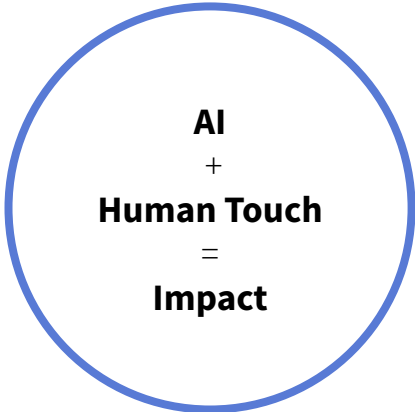

Source: [AP News](#)

Through this human+AI model, refugees receive validated translations, but can also communicate with real people who likely understand what they've been through.

# Other examples of AI for NFP productivity

- Content creation
- Personalise communication
- Data analysis to inform decisions
- Event planning with AI tools
- Real-time translation
- Routine tasks

# Where to start?

# Questions to ask yourselves

- **Are your staff ready to use AI?** (capability and skills)
- **What are your business priorities? What is highest for you?**
  - Internal (productivity)
  - External (social impact)
- **Are you thinking of building, buying, adopting, outsourcing?**
  - Do you have the **funds** to purchase?
  - Do you have the **staff capabilities** to build, and responsibly?

# Priority Areas to Get Started

		Build	Deploy	Benefits
1	<b>KNOWLEDGE</b> Train teams to challenge AI, not worship it	✓	✓	<ul style="list-style-type: none"><li>• Upskill staff</li><li>• Decide your AI strategy</li><li>• Problem-solving with AI</li><li>• AI risks and controls</li></ul>
2	<b>ORGANISATION</b> Test new processes in small, controlled experiments	✓	✓	<ul style="list-style-type: none"><li>• Rewire company architecture</li><li>• Work mobility</li><li>• Transform jobs &amp; roles</li><li>• Calibrate speed of execution</li></ul>
3	<b>DATA</b> Find your most critical data sets and ruthlessly review quality and volume	✓	✓	<ul style="list-style-type: none"><li>• Take stock of your data</li><li>• Improve quality &amp; curation</li><li>• Increase data sources</li><li>• Sanitise data</li></ul>
4	<b>RISK</b> Build a system to challenge AI decisions	✓	✓	<ul style="list-style-type: none"><li>• Design autonomy vs. control</li><li>• Explicability &amp; accountability</li><li>• AI security</li><li>• Tradeoffs in decision boundaries</li></ul>
5	<b>ETHICS &amp; REGULATIONS</b> Check which standards already cover AI risks	✓	✓	<ul style="list-style-type: none"><li>• Up to date with AI reg</li><li>• Audit AI systems</li><li>• Traceable decisions</li><li>• Universal ethical frameworks</li></ul>
